Ground Level, INC

Who we are

Presented by:
Danielle Alston
Ecologist/Account Manager
Who we are:

Established in 2005, Ground Level has become a leading land management company in the state of Florida. With over 50 years of combined work experience, our team recognizes that every project is unique and requires a individual approach to meet the client’s needs. Our knowledgeable and experienced group includes ecologists, a certified prescribed burn manager, project managers, safety managers, competent equipment operators, licensed herbicide applicators, and technicians trained in the proper techniques of tree and herbaceous installation. Restoration and reclamation are our passion and no project is too big or too small!
Invasive Species Removal

Each project is different and we provide the right tool (or service) for the job!

- Currently, we have 24 experienced, licensed herbicide applicators leading over 75 technicians out in the field
- All crew members go through continuous plant identification training and are taught to distinguish between the subtle differences between invasive species and their native look-a-likes.
- Mechanical removal
  - Hand pulling/heavy mowing
- Herbicide Application
  - ATV application
  - Back pack application
  - Airboat application
  - Aerial application
Native Plant Nursery & Installation

- With over 100 different native plant species growing in our nursery and access to multiple permitted harvest locations, Ground Level can provide a wide diversity of native plant material.

- We take pride in our quality of plant material and planting knowledge. Not only do our installers know the proper techniques to plant trees and herbaceous, they also recognize the best environments for each species.
Prescribed Burns

- Prescribed fire is a natural and efficient land management tool often used in Florida to reduce hazardous/nuisance/exotic fuels, promote native fire-dependent vegetation, and help prevent wildfire. With a certified prescribed burn manager on staff, Ground Level is qualified to provide prescribed fire as an integrated pest management tool.

- As with everything we do, safety is always our #1 priority.
Thank you for your time!
