

Everglades National Park Exotic Vegetation Management

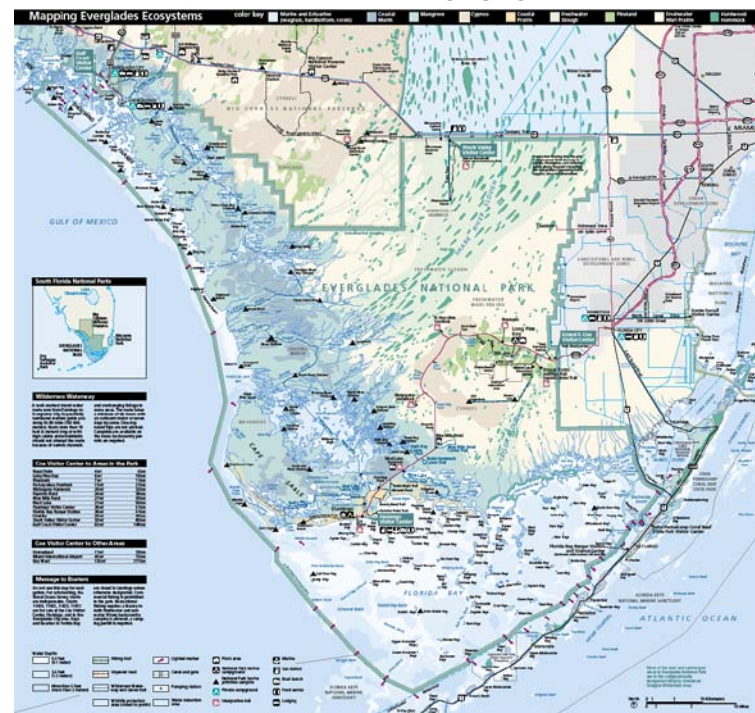

Hillary Cooley
National Park Service

History/Background

- Over 1,000 plants reported within ENP, approximately 220 are non-native.
- Park established 1947
- Melaleuca- 1st reported 1967 (eastern boundary)
- East Everglades Expansion Area added in 1989
- Lygodium- 1st reported 1999

Work in progress

Priority Plant Species

- **Priority Plants**

- All FLEPPC 2007 category I and II
(Top *Melaleuca quinquenervia*, *Casuarina equisetifolis*,
Lygodium microphyllum, *Schinus terebinthifolius*, *Thespesia populnea*, *Colubrina asiatica*, *Syngonium podophyllum*,
Epipremnum pinnatum)

- **Newly Detected Plant Species**

- 2008-*Phymatosorus scolopendria* (serpent fern)
Cyrtopodium polyphyllum
- 2009- *Senna pendula*- new populations

On Hole In the Donut mounds-disturbed area

Melochia nodiflora (Bretonica prieta)

Desmanthus leptophyllus (slenderleaf bundleflower)

Corchorus aestuans (jute)

Acalypha alopecuroides (foxtail copperleaf)

Invasive Species Programs

exotic vegetation management program

- Description
 - Manage and control invasive exotic plants within Everglades N.P.
- Objective
 - Reduce the presence and spread of exotic vegetation and preserve and protect park resources.
- Partners
 - FLDEP, SFWMD, ACOE, SAMP/DERM, NPSEPMT, NPSSFNRC, ECISMA/BASF and others
- Start/End Dates
 - Established 1949/on-going
- Status
 - On-going
- Funding (2009FY): SAMP=\$54,750 EPMT=\$100,000
- Annual Summary for 2009
 - SAMP=590 gross acres EMPT=2,508 gross acres
Total=3,098 gross acres

Fiscal Year Treatments: 2009

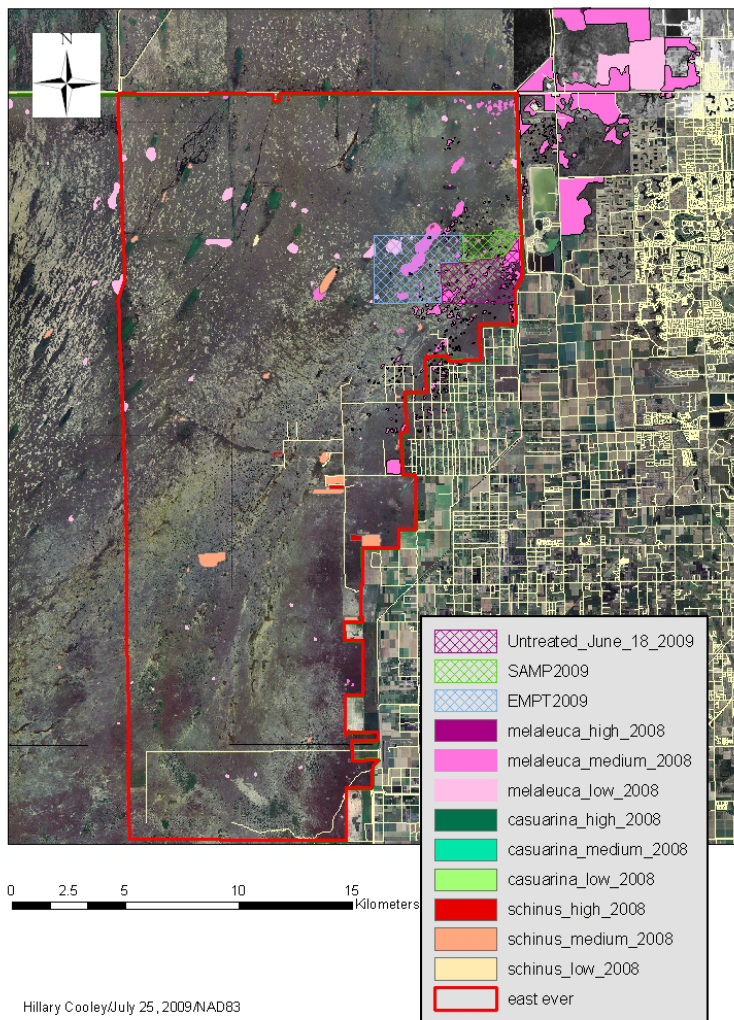

Everglades National Park

Completed

1. SAMP (590 acres)
2. EMPT (2,508 acres)
3. In house work (in progress)

Planned

4. NPSEVER- Re-treatment of melaleuca in North-east corner of EEEA (~1,000 acres)
5. ACOE/NPSEVER/DOT
Exotic vegetation treatment of culverts along Tamiami Trail (~150 acres)

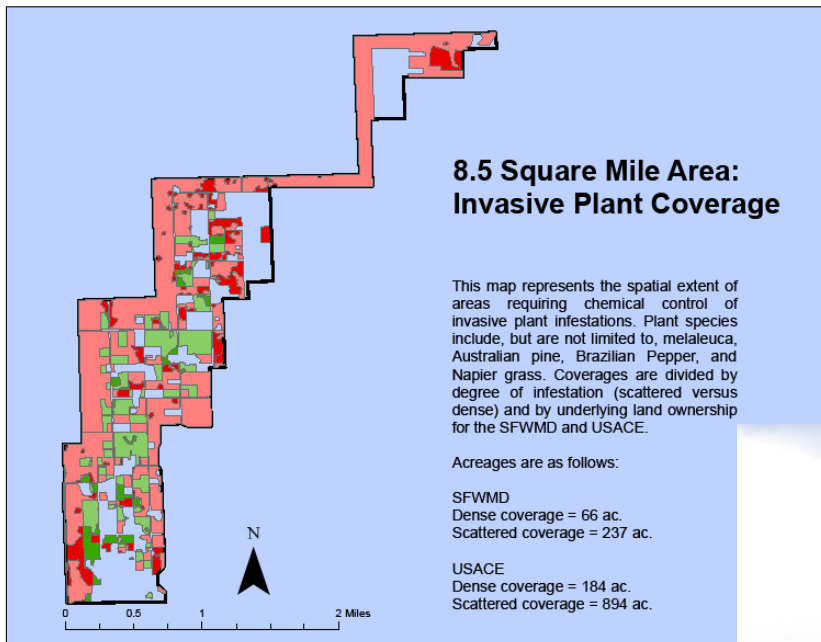

Fiscal Year Treatments: 2009

8.5 Square Mile Area

In progress

On our eastern boundary-
ACOE treatment of exotics

Fiscal Year Treatments: 2010

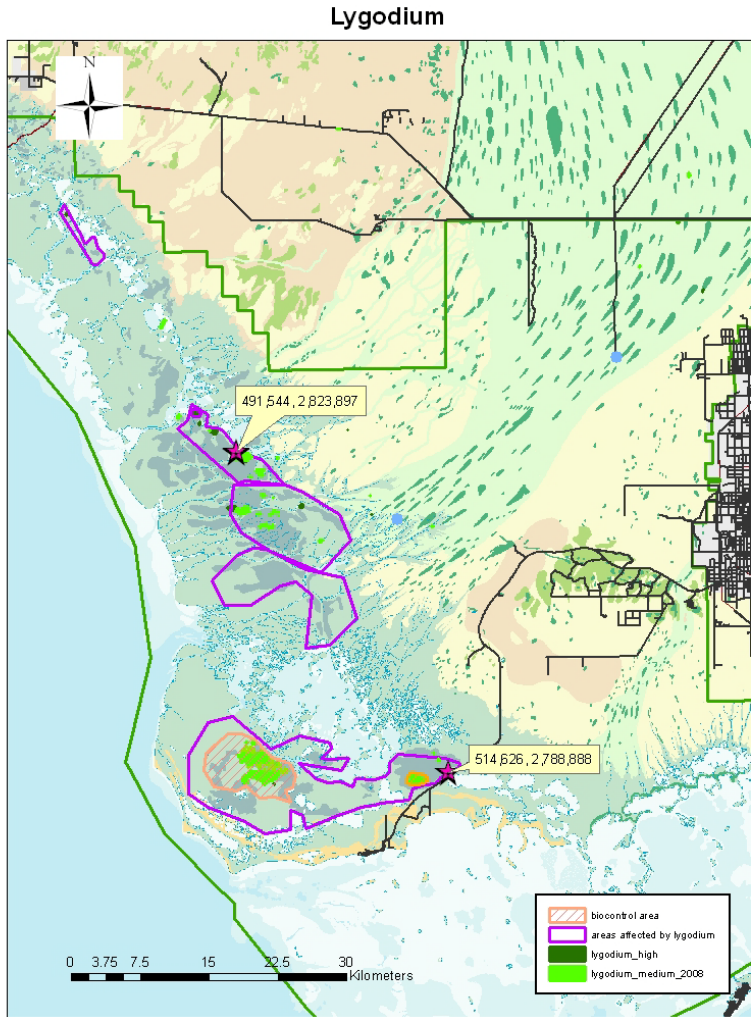

H.Cooley NAD83 Oct. 28, 2008

Planned

1. NPSEPMT-Treatment of melaleuca in EEEA (~3,000 acres)
2. NPSEPMT-Treatment (spot spray) of Australian pine in saline glades area (~700 acres)
3. MOA with Miami-Dade County-Treatment /Re-treatment of melaleuca and treatment of other Category I and II in EEEA
4. ACOE/NPSEVER/DOT Exotic treatment of culverts along Tamiami Trail (~150 acres) if not in FY2009

Biological Control Needs

H.Cooley NAD83 Mar. 20, 2009

Monitoring of the brown Lygodium moth (*Neomusotima conspurcatalis*) in the coastal marsh area of Everglades National Park

Monitoring

- FLCEPMT plots and Fire Effects plots
- ECISMA-wide Digital Aerial Sketch-mapping (DASM)

-Hope to improve
Lygodium/Fire monitoring

Digital Aerial Sketch Mapping

Everglades National Park

Melaleuca

<u>Coverage Class</u>	<u>Acres</u>
High	14

Innovations and Successes

Question-Do Brazilian pepper plants treated with Garlon 4 soon after burning re-sprout?

Conclusion-Treatment of burned Brazilian pepper with Garlon 4 is an effective management strategy

	Dead	Live	Total
Treated	10	0	10
Not treated	1	9	10
Total	11	9	20

BP plants were basil barked 3 days after fire

Chi Square 16.36

1 df p-value > 0.0005

Innovations and Successes

- Hopeful that Jenny Richards at FIU will be conducting research on *Colubrina asiatica* (lather leaf)
