Stems sprout from root crown and rhizome

Seed matures and above ground senescence

Flowering

Germinating seed

Bolting stem grows

Seedling

Hand pull
Remove roots and rhizomes of small infestations.

Dig root
Remove roots and rhizomes of small infestations.

Mow
Mow before seed set to prevent dispersal.

Foliar spray
Spray leaves until plant reaches bud stage.

Grazing
Graze with goats or sheep through bud stage.

Monitoring and repeated management is necessary for long term control of established infestations.

Common Tansy
Tanacetum vulgare
