Goats

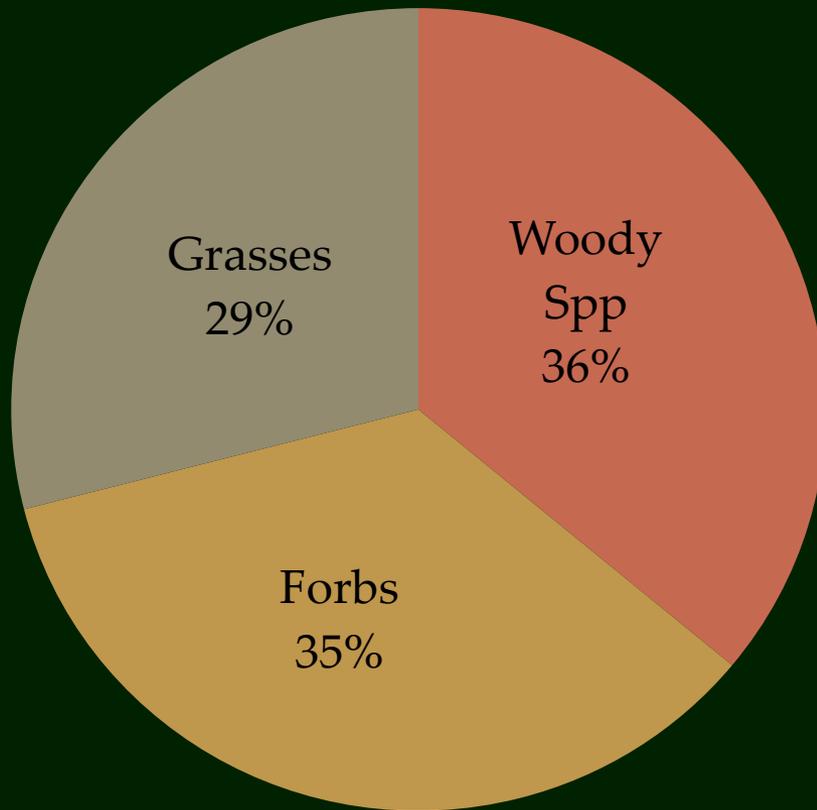

Horses

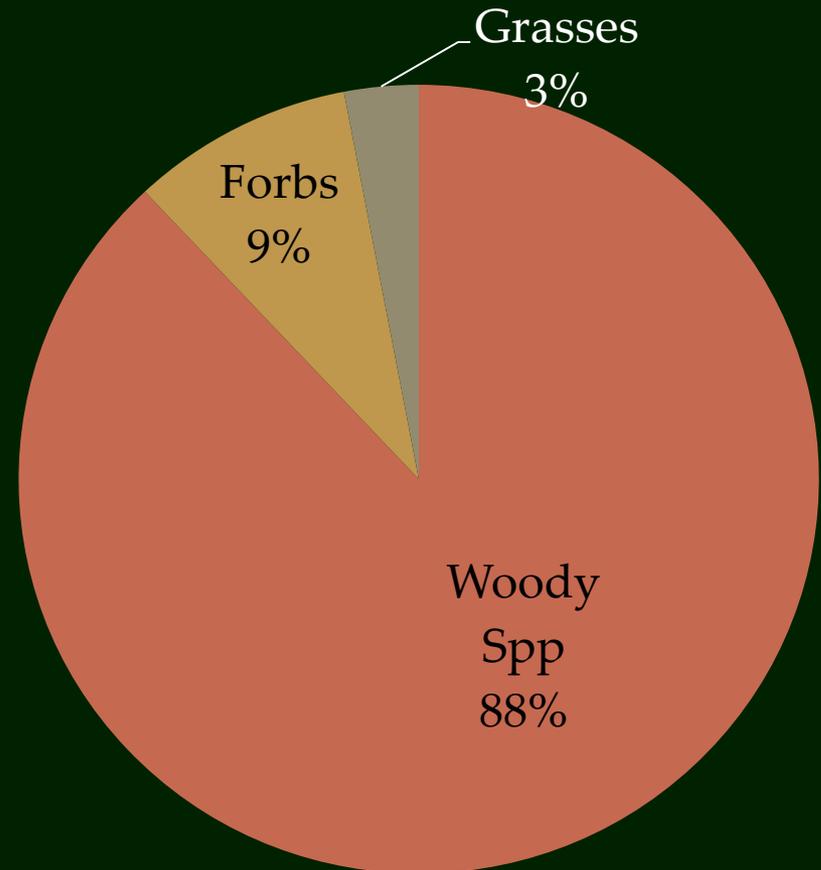

Forage Preferences in WI Oak Savanna

Scottish Highland Cattle

(Harrington and Kathol, 2009)

Meat Goats

(Harrington et al., unpublished data, 2011)

Cherrie Nolden

Livestock for Brush Control

- West Virginia, multiflora rose, 1986
- Goats reduced brush from 45% to 15% in one season
- Sheep required 3 seasons to do the same
 - Mowing/herbiciding improved sheep effectiveness
- Actual goat kill of brush
 - Early season defoliations
 - 5 years, killed 98%
- Management
 - Goats for brush
 - Sheep for forbs
 - Cattle for toppling

(Bryan, 1994)

Cherrie Nolden

Goat Production

- Meat market
 - 730,000 hd deficiency (Rayer, 2012)
 - Non-traditional demand
 - Omega 3s (Solaiman, 2007)
- Typical regional production
 - Confinement, grain-fed (WDGA, 2013)
 - Dairy buckling ADG: 0.2-0.5 lb/d (Ishler et al., 1998)
 - Boer goat ADG: 0.5-0.7 lb/d (Barry & Godke, 1978)
- Parasite management
 - *Haemonchus contortus*: Barberpole Worm
 - FAMACHA
 - Body Condition Score

1° Research Question:

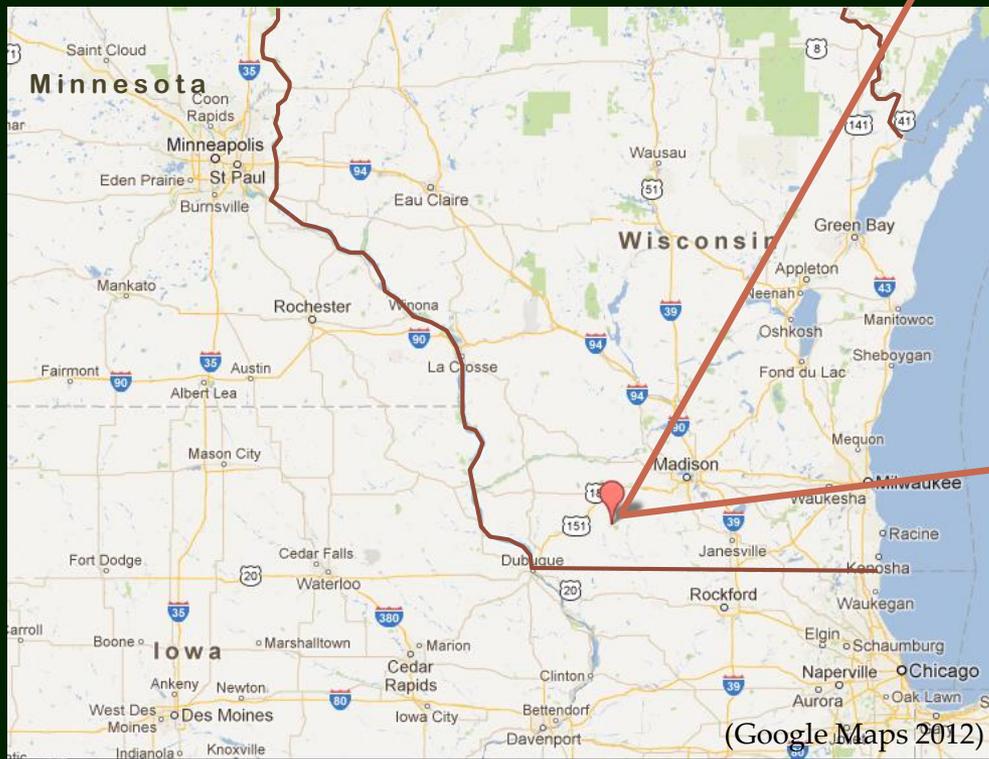

Can rotational
browsing with goats
be both an
effective
restoration tool
for reducing a
dense shrub midstory
and meet
basic standards for
goat meat production?

Cherrie Nolden

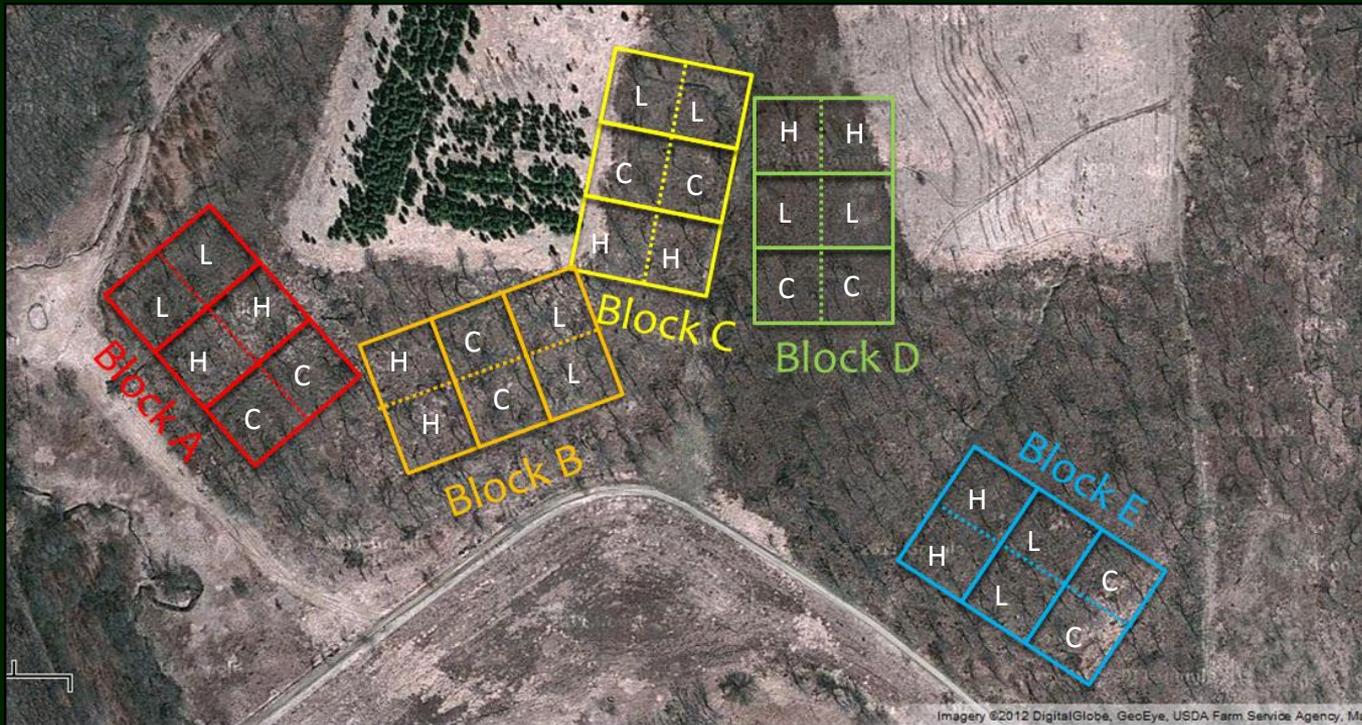

Research Site

- Yellowstone Lake Wildlife Area, WDNR
- 2008 Tree thinning
- Dense mid-story of closed shrubs

Methods: Experimental Design

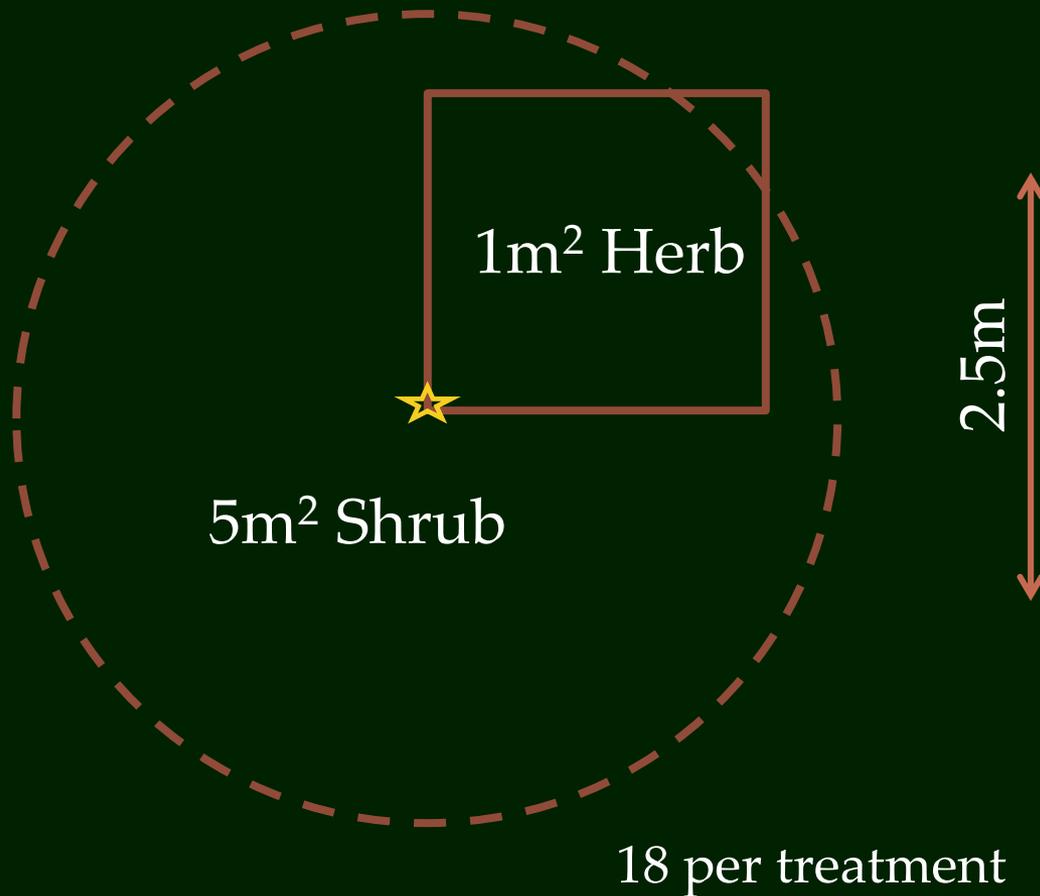

- RCBD:
 - 5 blocks
 - 3 treatments
 - 0.5 hectares each
- 3 treatments:
 - “Light” browsing (L)
 - “Heavy” browsing (H)
 - Control (C)
- Goats:
 - 6.4 AUE
 - Mix-breed
 - Meat type

Methods: Vegetation Sampling

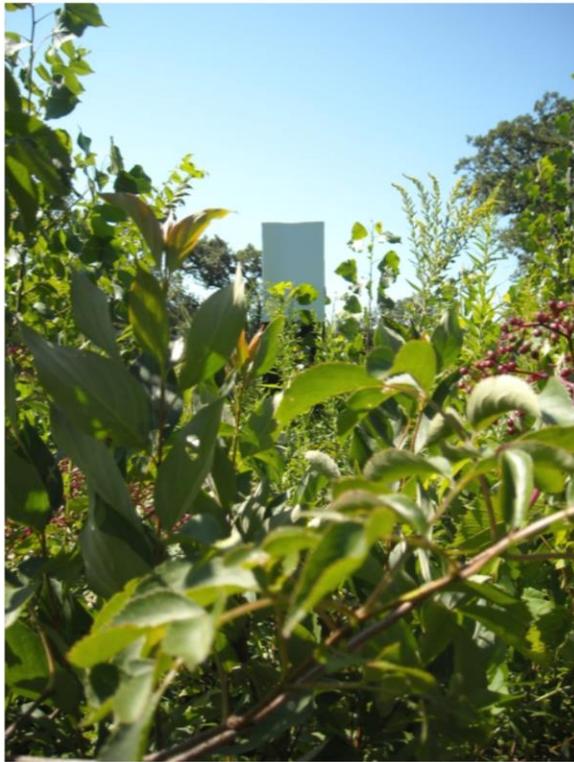

■ Nested quadrats

■ Coverboard

Methods: Hypotheses

SHRUBS	Richness	
	Density	H_0 : means equal
	Cover	btwn controls,
	Height	treatments

HERBACEOUS	Richness	H_a : means unequal
	Cover	btwn controls,

BIOPHYSICAL	Soil compaction	treatments
	Litter depth	
	Light penetration	

GOATS	Weight	H_0 : no change, H_a : before \neq after
	Parasitism	

	Dietary Preference	H_a : % eaten=cover
--	--------------------	-----------------------

Methods: Data Analysis

SHRUBS	Richness	Repeated Measures ANOVA, $p \leq 0.05$
	Density	
	Cover	
	Height	
HERBACEOUS	Richness	$p \leq 0.05$
	Cover	
BIOPHYSICAL	Light penetration	Student's t-test, $p \leq 0.05$
	Soil compaction	
	Litter depth	
GOATS	Dietary Preference	Paired t-test, $p \leq 0.05$
	Weight	
	Parasitism	

Shrub Results

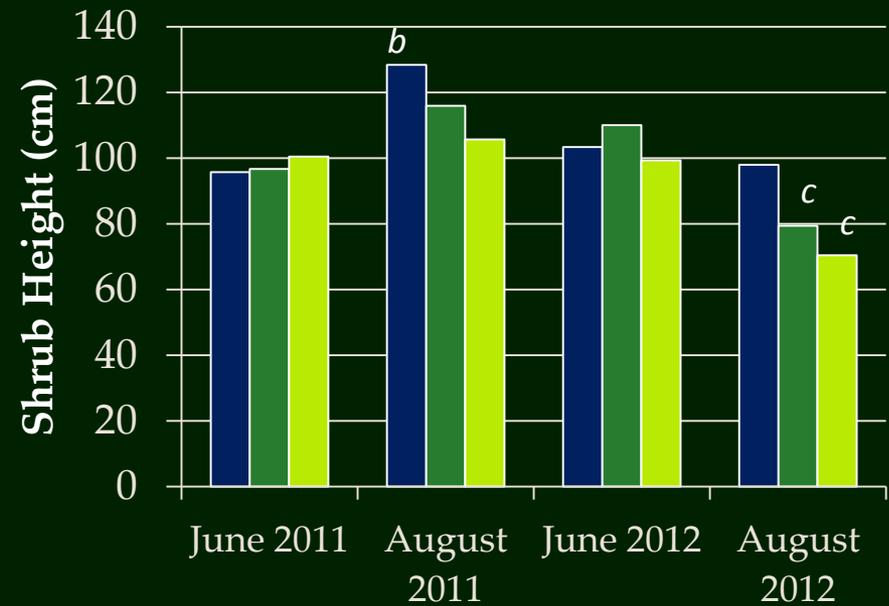

$p < 0.05$

Graminoid Cover

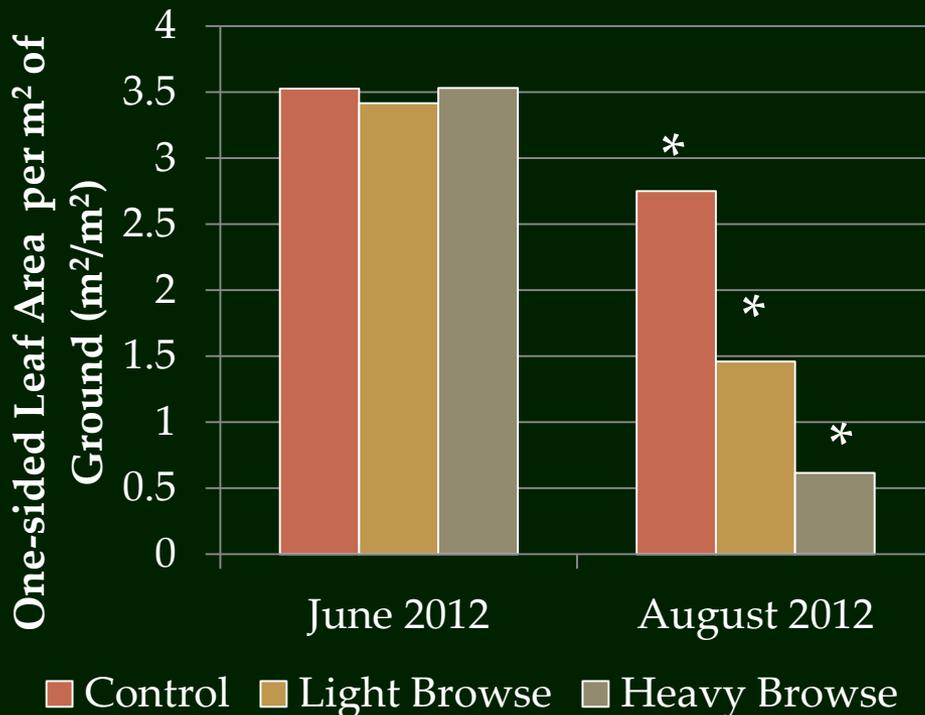

Graminoid Richness

- Control
- Light Browse
- Heavy Browse

LAI, Litter Depth, Compaction, Erosion

Leaf Area Index

Litter Depth

- Significant browse effect
- Decrease in depth in the heavy browse paddocks: 15.7-11.6 cm

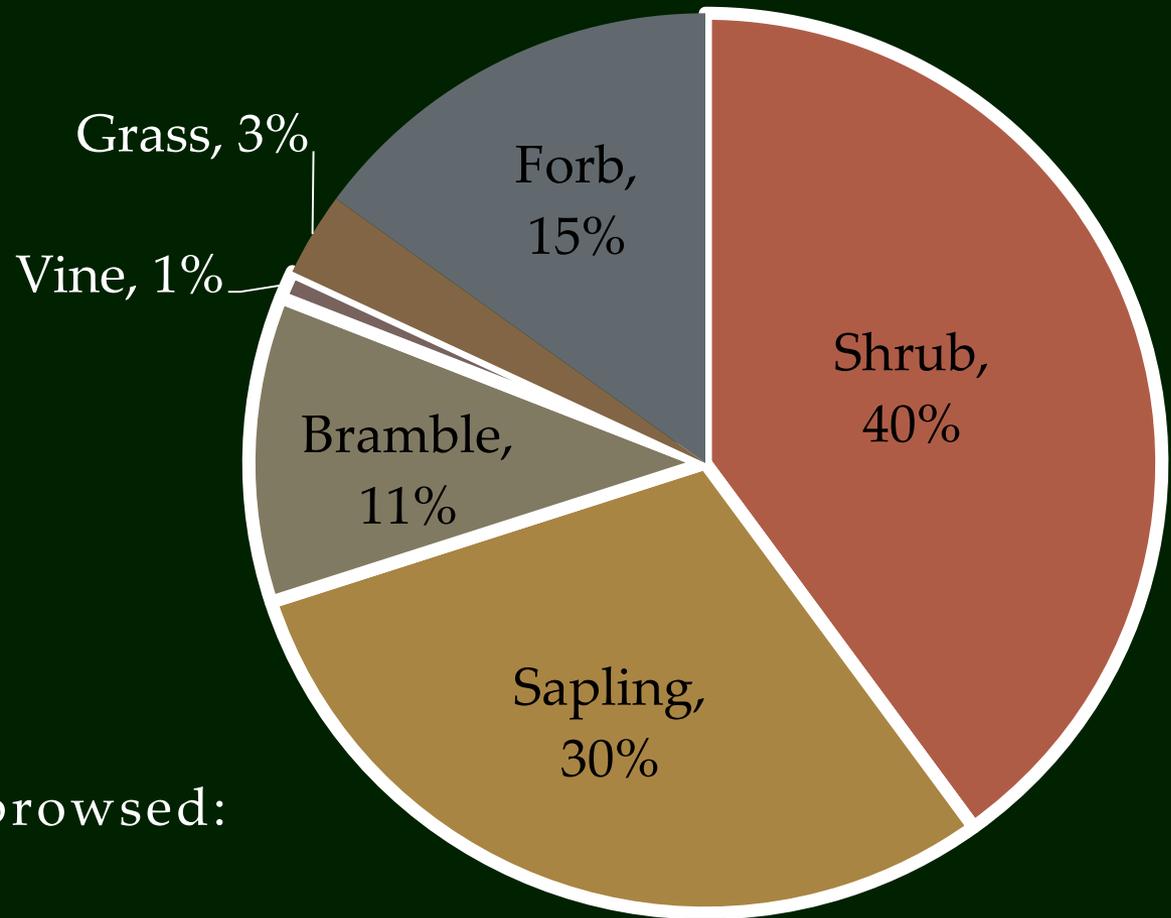

Soil Compaction

- No significant differences in either year

Erosion

- Trampling to bare soil
- Design flaw, behavior
- Dry weather

2012 Goat Forage Preference

- 82% Woody spp.
- 18% Herb. spp.

- Most frequently browsed:
- 12.7% Prickly ash
- 10.1% Gray dogwood

BCS AND FAMACHA

Paired T-Test: Before Browsing and After Browsing Differences in **Body Condition Score**

	T	DF	P-value	Mean Difference	95% CI of Difference
All Goats, 2 Years	4.2052	192	<.0001	0.24	0.35 to 0.13
2012	0.1163	82	0.9077	0.01	0.19 to 0.22
2013	7.7001	109	<.0001	0.43	0.54 to 0.32

Paired T-Test: Before Browsing and After Browsing Differences in **FAMACHA Score**

	T	DF	P-value	Mean Difference	95% CI of Difference
All Goats, 3 Years	1.2353	278	0.2177	0.07	0.18 to 0.04
2011	0.5323	85	0.5959	-0.05	0.13 to -0.22
2012	1.8133	82	0.0734	0.19	0.4 to -0.02
2013	0.6949	109	0.4886	0.06	0.25 to -0.12

Average Daily Gain (ADG) by Year and Goat Class, 95% CI

- 0.1-0.4 lb/d is excellent kid growth (Kerr Center, 2012)
- 0.14 lb/d OK Buck Test (Kerr Center, 2012)
- 0.13 lb/d MD Buck Test (W. Maryland University, 2011-2012)
- 0.20 lb/d BAAP 2012 (Nolden, unpublished data)

Goat Class by Year Comparisons

Conclusions

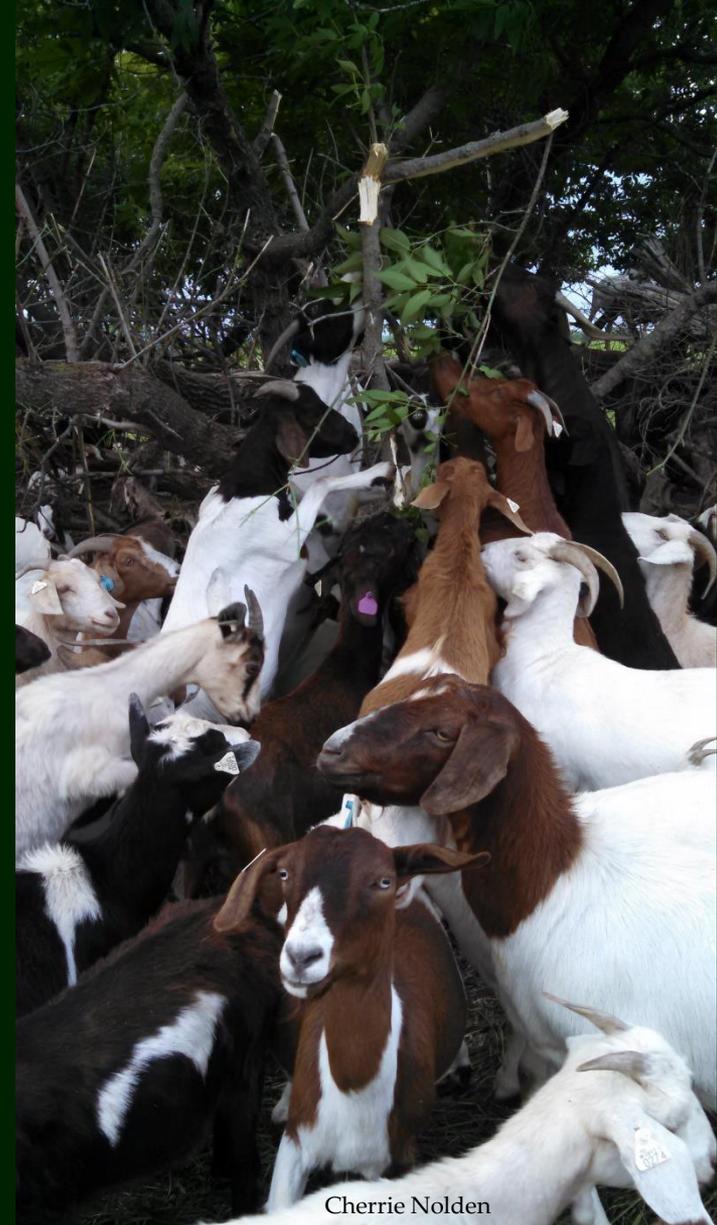

- Goat browsing reduces shrub layer height and cover
 - Light levels increase
 - Sun loving plants increase
- Goat kid gains are economically viable without grain supplementation
- Soil did not become significantly more compacted
- Litter depth reduced under heavy browsing
- Goat browsing likely can be a very useful management tool for woody plant control
- Longer term research is needed
