INTRODUCTION

This directory was created to help Cooperative Weed Management Areas (CWMAs), Cooperative Invasive Species Management Areas (CISMAs), and similar entities secure appropriate ecological contractors to help with revegetation after invasive plant treatments. Prepared by the Midwest Invasive Plant Network (MIPN) in partnership with the U.S. Forest Service (USFS), the directory provides information for companies serving Iowa, Illinois, Indiana, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.

Some government agencies and other non-profits maintain listings of ecological service providers. Where known, these resources are linked in the “Additional Resources” section of this document. The intention with this project was to supplement existing efforts on a regional scale by providing somewhat more in-depth information about the companies and their ecological services to help users more readily identify contractors that best fit their project needs. To reach this goal, we drew heavily from existing lists and internet search results to build an initial contact list of 155 companies. In June of 2018, these contacts were each sent an eight-question online survey that took under six minutes, on average, to complete. The listings contained in this document reflect the results of the survey obtained over a three-month period. Companies that declined to answer the survey are not listed.

The information provided is subject to change without notice. There was no financial exchange associated with listing in this directory, and the presence of a listing does not constitute an endorsement by MIPN or USFS. Any company providing ecological services in the Midwest is welcome to add their information to this directory. MIPN aims to update the directory at least annually; vendors can request editing, addition, or removal of a listing by emailing mipn@mortonarb.org or calling (630) 719-5649.
GUIDANCE ON TERMS USED IN LISTINGS

To help you determine if a particular company will be interested in your project, start by checking to see if they have minimum or maximum project sizes in terms of acreage or dollar value.

If “Ecosystem-specific seed mixes” is checked, the company sells one or more mixes that it has developed for use in specific ecosystem types (e.g., “emergent wetland seed mix”). Species in mixes should always be double checked for site/project suitability.
BOEHM'S GARDEN CENTER

BOEHMSGARDENCENTER.COM

708 Macomb Road
Rushville, IL 62681

Carey Boehm-Corrie
217-322-6644

Additional Information, if any: Landscapes of Places offers Landscape Restoration Planning and Design, Ecological Restoration and Land Stewardship in eastern Wisconsin. Typical projects include long-term engagements with landowners of 5 to 500 acres, providing assistance in analyzing current ecological conditions, defining desired sustainable goals and designing step-wise and adaptive implementations with measurable outcomes. With a long-term commitment, lands of a range of local ecosystem types and initial conditions are candidates for our hands-on restoration planning and design services.
MAREK LANDSCAPING

125 W. Melvina Street, Suite 1

Invasive plant removal/control: ✓

Additional Information, if any: At Marek we see the world better. We regularly visit the highest quality reference sites in various seasons in order to observe the foundation and build a memory of a functioning ecosystem’s characteristics. We are driven by the want to help humans interface elegantly with intact ecosystems. Regenerative design and construction services for public and private property. One of our focuses is on Great Lakes bluffs where we have extensive experience managing plant communities and providing sustainable erosion control services. We provide prescribed fire services and invasive plant management primarily in Southeast Wisconsin but we can travel.  "Sure footed and skilled in the identification of friend and foe, we lay waste to loads of nasty crap and humbly make way for what was here before us."

Invasive plant removal/control: ✓

Additional Information, if any: Native Niche LLC provides services to change anything from small yards to large properties back to Wisconsin’s natural heritage. We specialize in plant identification, invasive plant removal, and establishing native plantings to replace them. We work to restore and preserve gardens, prairies, woodlands, and wetlands in southeastern Wisconsin. We conduct botanical surveys and frequently partner with Great Lakes Ecological Services, LLC, for wildlife surveys and comprehensive property management plans enhancing wildlife diversity. Certifications in many categories of restoration work and insured. We strive to reduce or remove the need to use herbicides on our projects.
