The National Association of Invasive Plant Councils (NAIPC) is a coalition of state and regional councils representing professional natural resource managers, scientists and others interested in invasive plant ecology, management and prevention. NAIPC is a contact hub for organizations including cooperative weed management areas (CWMAs), cooperative invasive species management areas (CISMAs), state invasive species councils, and other partnerships.

**NAIPC’s Goals:**

To **provide support** for the implementation of national invasive species initiatives and other activities of national importance.

To **facilitate communication** between IPCs/EPPCs, especially regarding issues and policies of national importance on invasive plants that threaten natural areas and wildlands.

To **communicate and represent** the interests of IPCs/EPPCs on issues and policies of national importance regarding invasive plants that threaten natural areas and wildlands.

To **support formation and growth** of IPCs/EPPCs, and to provide a forum for all IPCs/EPPCs to share in and benefit from the information generated by each EPPC and this association.
